## Bed Bug Killer

MONTEITH MINERALIZED SOLUTIONS, INC

### PREPARATION & TIPS

- BBK IS A NEW AND TOTALLY ENVIRONMENTALLY FRIENDLY BED BUG KILLER. IT IS A CLEAR, NON-STAINING FLUID THAT DOES NOT HARM OR PIT SURFACES. IS APPLIED UNDILUTED BY SPRAYER SET ON A "FINE MIST" SETTING.
- BBK CONTAINS ONLY INGREDIENTS THAT ARE ON THE E.P.A. EXEMPTION LISTS FOR BOTH ACTIVE INGREDIENTS (CEDAR OIL) AND INERTS. THESE ESSENTIALLY FOOD GRADE INGREDIENTS ARE CLASSED AS "LOW RISK" BIOPESTICIDES BY THE E.P.A. AND, AS THEY ARE EXEMPT FROM REGISTRATION, THERE IS NO FEDERAL REGISTRATION NUMBER. IT IS ALSO ON THE FDA'S "G.R.A.S. LIST" OF SAFE PRODUCTS.
- STORE USED AND UNUSED BBK WITH CAP FIRMLY AFFIXED. STORE AT TEMPERATURES BETWEEN 30 AND 80 DEGREES. TO USE FROM GALLON SIZE, POUR UNDILUTED INTO SPRAYER RESERVOIR AND CHECK SPRAY SETTING
- VERY LITTLE BBK TREATS A SIZEABLE AREA DEPENDING ON DEGREE OF INFESTATION AND PROPER APPLICATION. YOU SHOULD BE ABLE TO TREAT A ROOM IN MERE MINUTES
- VENT 15 MINUTES AFTER TREATMENT. ALL MAY RE-OCCUPY 15 MINUTES AFTER THE ROOM IS VENTED. ONLY A SLIGHT AND PLEASING CEDAR AROMA WILL REMAIN

### APPLICATION INSTRUCTIONS

REMOVE PEOPLE, PETS, BIRDS AND FLOWERING PLANTS FROM THE AREAS TO BE TREATED.

BEST TO WEAR A DUST MASK AND GLOVES WHILE TREATING THE ROOM(S) AS THE SPRAY IS FAIRLY CONCENTRATED.

#### PREPARE THE SUBJECT ROOM BY:

- STRIPPING THE BED
- SEPARATING MATTRESS AND BOX SPRING
- OPENING DRAWERS, CABINETS AND CLOSETS-REMOVING CUSHIONS WHERE POSSIBLE
- GENERALLY EXPOSE AREAS OF LIKELY BED BUG OCCUPATION

DUE TO SOME POSITIVE RESIDUAL EFFECT, IT IS BEST NOT TO VACUUM THE TREATED AREA FOR A DAY OR TWO.

FIRST, MIST THE LIKELY BED BUG LOCATIONS (AND EGGS), SUCH AS:

- MATTRESSES
- MATTRESS HEMS
- INSIDE THE BOX SPRING
- BED FRAMES AND BEHIND HEAD BOARD BEHIND AND BENEATH FURNITURE AROUND UPHOLSTERY AND DRAPES
- IN ALL CREVICES SUCH AS MOULDINGS AND BASEBOARDS, IN THE INFESTED AREA.

WHEN TARGET LOCATIONS HAVE BEEN MISTED TAKE A COUPLE OF MINUTES AND MIST THE ROOM GENERALLY.

#### BE THOROUGH.

PLEASE NOTE: BED BUGS ARE KILLED BY BREATHING IN THE VAPOROUS MIST, NOT BY BEING "SHOWERED" WITH SPRAY. SPRAYING A STREAM OF FLUID ON SUSPECTED OR KNOWN BED BUG LOCATIONS WILL USE EXCESSIVE AMOUNTS AND WILL NOT RESULT IN THE MOST EFFICIENT KILL.
